CODASYL PUBLICATIONS

ACM is the sole source in North America for the following publications by CODASYL Committees.

Selection and Acquisition of Data Base Management Systems

This report presents alternatives for the selection and acquisition of a database management system as part of the development of an automated information processing system. It is the third in a series of CODASYL Systems Committee reports on its efforts to build up an expertise in and develop advanced languages for data processing and is based on the results and experience gained from the preparation of the previous reports. It focuses on the more pragmatic issues of the selection and acquisition process and is addressed primarily to the team responsible for evaluating the needs for selection and acquisition of a data base management system.

The report should be of significant value to users and designers of such systems since it approaches the questions of selection and evaluation by relating user needs to system capabilities.
